*Introduction to Limb Arthrology* Forgotten Books

Excerpt from Quain's Elements of Anatomy, Vol. 2 of 3: Part II.; Arthrology; Myology, Angeiology IN the year 1889 a Commission was nominated by the German Anatomical Society, at the instigation of Professor His of Leipzig, to consider the question of Anatomical Nomenclature, and to prepare a series of names which, it was hoped, would be universally adopted. The Commission has recently issued a report dealing with Myological Nomenclature, but the printing of this Volume was at that time too far advanced to allow of the adoption of the names therein proposed. The chief differences between the names recommended by the Commission and those used, or given as synonyms, in this work are shown in the appended table. *The Comparative Anatomy of the Domesticated Animals* Alpha Edition

This book discusses arthrology in general and of the upper and lower limbs specifically. It covers the examination of each joint of both limbs, considering their basic anatomy and physiology. It presents the various tests required for examining the joints and articulations and the systematic approaches that should be followed in cases of diagnosis of diseases and injuries related to them as well as in specific cases of disease and injuries. The book also defines special tests required in varied situations and mentions precautions that should be taken while examining patients of specific ages or work groups. To simplify the explanation and promote education, original photographs either documented during clinical examination of the foot and ankle or taken using models are used in this book. These photographs are from accomplished orthopedic surgeons and have not been documented anywhere before. In addition, some chapters showcase line diagrams, sketched to illustratively discuss the information being presented. The book will help readers understand the importance of this expanding sub-specialty in orthopedics and will be useful for orthopedic surgeons taking exams in different universities of the world as well as sub-specialty exams of each joint.
