The Colbert Steam Plant is located on the south bank of Pickwick Landing Lake at mile 245 (Tennessee River mileage upstream from the confluence with the Ohio River) and 14.5 miles downstream, or west, of the Wilson Dam.

 Kingston Steam Plant is located at the base of a peninsula formed by the Clinch and Emory River embayments of Watts Bar Lake about 2.7 miles above the confluence of the Clinch and Tennessee Rivers. The plant derives its name from Kingston, a small town of colorful history lying two miles to the south, which employs the distinction of being the capital of the State of Tennessee for one day, September 21, 1807.

 The development from inception through initial operation of four major TVA water control projects in the upper or northeastern part of the Tennessee Valley - Watauga, South Holston, Boone, and Fort Patrick Henry, collectively designated Upper Holston - is presented in this technical report, The Upper Holston Projects. Improvement of the minor

Wilbur project immediately below Watauga is included as an appendix. The manuscript was compiled from basic planning, design, construction and other development of the projects and comprises a record of the more important facts concerning the planning, design, construction, costs, and initial operations of these projects by the TVA.

 Nickajack Dam was built by TVA in the mid-1960's

at Tennessee River mile 424.7 to replace the old and leaking Hales Bar Dam located 6.4 miles upstream. The Nickajack site is located in Marion County, Tennessee, 18 air miles west of Chattanooga and about 2 miles northwest of the junction of the Alabama-Georgia-Tennessee State lines. Historically, the ancient Indian town of Nickajack was located at Shellmound, about a mile and a half upstream from the dam on the left bank of the reservoir. Nickajack was inhabited by the

Cherokees as early as 1730. In 1784 the warlike Chief Dragging Canoe, who had earlier broken with the Cherokees, launched his marauding Chickamaugas from the town and used the nearby Nickajack Cave as a hideout. Later, during the Civil War, saltpeter was mined in the cave for Confederate gunpowder. The Colbert Steam Plant Vols. for May 1929-Dec. 1958 include the Journal of the American Society of Heating and Air-Conditioning Engineers (called in 1929-54

American Society of Heating and Ventilating Engineers) in "Journal Section."

**Fiscal Year-end Report - Export-Import Bank of the United States**

Vols. 76 , 83-93 include Reference and data section for 1929 , 1936-46 (1929- called Water works and sewerage data section)

Here is a convenient, concise reference book for pump users, application engineers, technicians, and buyers. It contains, in condensed form, valuable

information on selecting centrifugal and positive-displacement pumps for given applications, creating the necessary documentation, choosing equipment manufacturers, and checking vendor data. You will find a complete explanation of the types of pumps and the terms and parameters used in pump applications. This book outlines the data required by the client, engineer, and buyer to obtain a comprehensive quote.

Hands-On Maintenance for Water/Wastewater Equipment deals with equipment maintenance as individual components, not as complete machines. This allows more information about the design, application and maintenance requirements of machinery to be presented. The text covers basic operating characteristics of machinery components, making it a valuable reference source as well as a training and maintenance manual.

Written in easy-to-understand language, without complex formulas or technical theories, this text provides you with basic information to help you acquire a general understanding of how components function and how to keep equipment operating properly.
