Beginning AutoCAD 2007 is a course based on learning and practising the essentials of 2D drawing

using AutoCAD. Bob McFarlane's hands-on approach is uniquely suited to independent learning and use on courses. The focus on 2D drawing in one book ensures the reader gets a thorough grounding in the subject, with a greater depth of coverage than tends to be available from general introductions to AutoCAD. As a result, this book provides a true, step-by-step, detailed exploration of the AutoCAD functions required at each stage of producing a 2D drawing - an approach often not found in the many software reference guides available. The emphasis on learning through doing makes this book ideal for anyone involved in engineering, construction or architecture - where the focus is on productivity and practical skills. The author has also matched the coverage to the requirements of City and Guilds, Edexcel (BTEC) and SQA syllabuses. The following new features in AutoCAD 2007 are covered in this book:
 

- \* Create: Using enhanced commands and draughting tools to create all types of content
- \* Manage: Using the Sheet Set Manager and Attribute Extraction to manage data and information
- \* Produce: Using dynamic blocks, dynamic input and selection preview to increase productivity
- \* Share: Using e-transmit, publish to the web and PDF files to share information

 Plus, a new companion website features AutoCAD files for selected activities for students to work with. The result is a useful refresher course for anyone using AutoCAD at this level, and those upgrading to the new software release. The course is also

designed to be fully relevant to anyone using other recent releases, including AutoCAD 2006. ABOUT THE AUTHOR Bob McFarlane has been writing books on AutoCAD for over 10 years.

Aircraft Computer Aided Drafting LAB is one of the important subjects included in the second year of B. Tech curriculum by JNTU, Hyderabad and MLRIT Autonomous. This lab includes the practical application of the drawing studied in Engineering Drawing in the first year of the curriculum. The Aircraft Computer Aided Drafting Lab Curriculum requires the understanding and practice of drawing the machine parts. The machine parts and the assembly of the machine parts is to be done by students in this lab. The students must grasp following aspects while drawing in ACAD lab as given below. Understanding the basics drawings and dimensioning. Analyzing the principles of drawings and draw the different drawings Developing the assembly drawings from the given parts Developing the sectional parts from the given problem. Analyzing the different joints and applying them in the assembly of aircraft parts. Students will be in a position to grasp the above aspects while doing lab practical's as defined in the manual. This manual will need constant up gradation based on the student feedback and change in the syllabus.

*Engineering Graphics with AutoCAD 2006* New Age International

In Engineering Design Graphics with Autodesk Inventor 2020, award-winning CAD instructor and author James Bethune shows students how to use Autodesk Inventor to create and document drawings and designs. The author puts heavy emphasis on engineering drawings and on drawing components used in engineering drawings such as springs, bearings, cams, and gears. It shows how to create drawings using many different formats such as .ipt, .iam, .ipn, and .idw for both English and metric units. It explains how to create drawings using the tools located under the Design tab and how to extract parts from the Content Center. Chapter test questions help students assess their understanding of key concepts. Sample problems, end-of-chapter projects, and a variety of additional exercises reinforce the material and allow students to practice the techniques described. The content of the book goes beyond the material normally presented in an engineering

graphics text associated with CAD software to include exercises requiring students to design simple mechanisms. This book includes the following features: Step-by-step format throughout the text allows students to work directly from the text to the screen and provides an excellent reference during and after the course. Latest coverage for Autodesk Inventor 2020 is provided. Exercises, sample problems, and projects appear in each chapter, providing examples of software capabilities and giving students an opportunity to apply their own knowledge to realistic design situations. Examples show how to create an animated assembly, apply dimension to a drawing, calculate shear and bending values, and more. ANSI and ISO standards are discussed when appropriate, introducing students to both so they learn appropriate techniques and national standards.
